GRAND TOTAL OF DANDRITE PERSONNEL (FTE)
FOR THE YEARS' 2020-2023

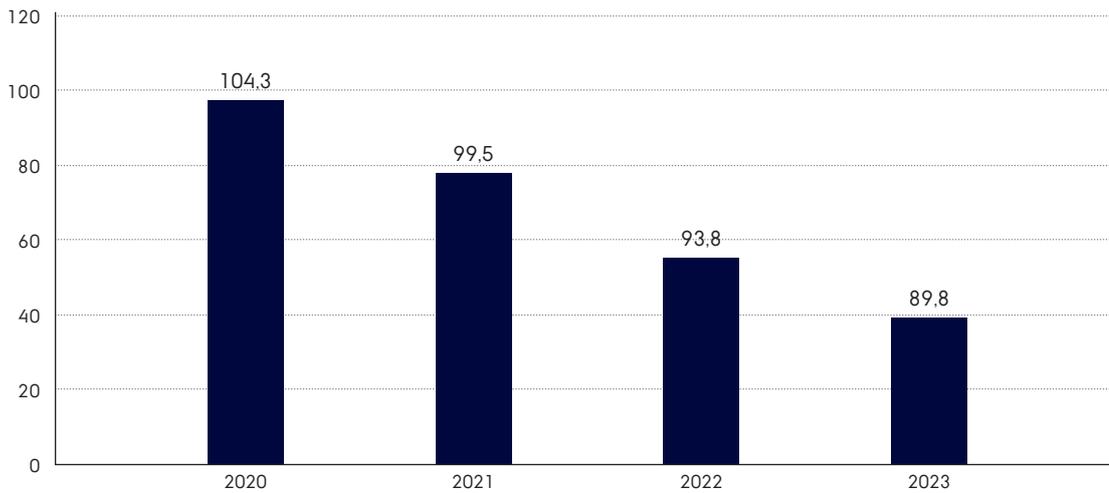

Figure 5: Graphic representation of personnel progression from 2020 through 2023 for appointment categories (FTE count). Since DANDRITE's inauguration in 2013, and until 2019, staff development has been characterized by considerable growth each year. Since 2021, the number of staff has started to decrease as the first cohort of five GLs is ramping down their activities because they are finishing their contracts and preparing for the next step. In the coming years, we expect an increase in staff since the new cohort of GLs is establishing their labs and recruiting staff members.

DANDRITE IS THE DANISH NODE OF THE NORDIC
EMBL PARTNERSHIP FOR MOLECULAR MEDICINE:

A fluorescence microscopy image showing a dense network of neurons. The cell bodies are stained in green and red, while the nuclei are stained in blue. The neurons are interconnected by a complex web of fine, dark lines representing axons and dendrites. The overall appearance is that of a highly organized and interconnected neural circuit.
